Title: (ENG) GARBAGE CRUSHER

Abstract: (ENG)

PROBLEM TO BE SOLVED: To prevent a crushing sound and a vibration noise from being leaked to an indoor during crushing a garbage in a garbage crusher.

SOLUTION: The garbage crusher has a mounting flange 32 mounted to a mounting hole of a sink, a crushing chamber and a crushing mechanism for the garbage, a driving part, a device body 22 connected to the mounting flange 32 below the sink, and a safety cap 48 attached to an introduction passage 66 of the garbage from an opening 64 of the mounting flange 32 to the device body 22. In the garbage crusher, a cylindrical vibration-preventing joint 39 made of an elastic body is interposed between the mounting flange 32 and the device body 22 and the vibration-preventing joint 39 and the device body 22 are connected such that the device body 22 is hung and retained by the vibration-preventing joint 39. A cap-receiving part 126 having a stepped shape is formed on an inner periphery side of the vibration-preventing joint 39 and the safety cap 48 is received and supported by the cap-receiving part 126.
